UKM-S Self-Priming Centrifugal Pump

General Specifications

Fields of Application

- Pumping of domestic and industrial sewage.
- Pumping of chemical and industrial waste water.
- All kinds of drainage and dewatering works.
- Pumping of polluted liquids of industrial processes.

Pumped Liquids

UKM-S series pumps are designed for handling mild industrial corrosives, mud or slurries containing large entrained solids.

Design

- UKM-S series pumps are self-priming centrifugal pumps model with a suction check valve.
- Since they are self-priming they can be mounted high and dry above the sump a floor level with only suction line in the liquid.
- Pumps are available as basic units for connection to diesel engines as well as the electric motors via flexible couplings.
- UKM-S series are available in six basic discharge sizes: 2", 3", 4", 6", 8", 10".
- Impellers are open type with two vane and handle solids up to 76 mm (3") depending on the pump type.
- Unclogging is very quick and simple. Removable coverplate permits easy access to impeller, wear plate and seal. The clog is removed and pump returned to normal operation in minutes without disturbing suction or discharge piping.
- Volute casing is designed to provide large volume of liquid retention for dependable priming and repriming performance. No external or internal priming devices are used.
- Suction check valve (Flap Valve) is one piece molded and specially designed. It can be removed or installed without disturbing suction piping.
- Bearing housing is supported by volute housing. It eliminates alignment problem.
- UKM-S series pumps are designed to reprime automatically in a completely open system. They can do it with the pump casing only partially filled with liquid and with a completely dry suction line.

Pump Shaft

Chromium steel (AISI 420) fine grained shafts are used on UKM-S pumps.

Bearings

Single Row Ball Bearings and Double Row Angular Contact Ball Bearings are used in sizes to withstand thrust and radial stresses. Oil bath lubrication system is used for bearings.

Shaft Seal

For the shaft seal, the mechanical seal is used.

Technical Data

- Suction Flanges : 2" – 10"
- Discharge Flanges : 2" – 10"
- Speed Range : 650-2900 rpm
- Capacity Range : 50–730 m³ / h
- Head Range : 4–40 mwc

Drive

Common electric motors according to IEC (and NEMA) and combustion engines can be used to drive the pump.

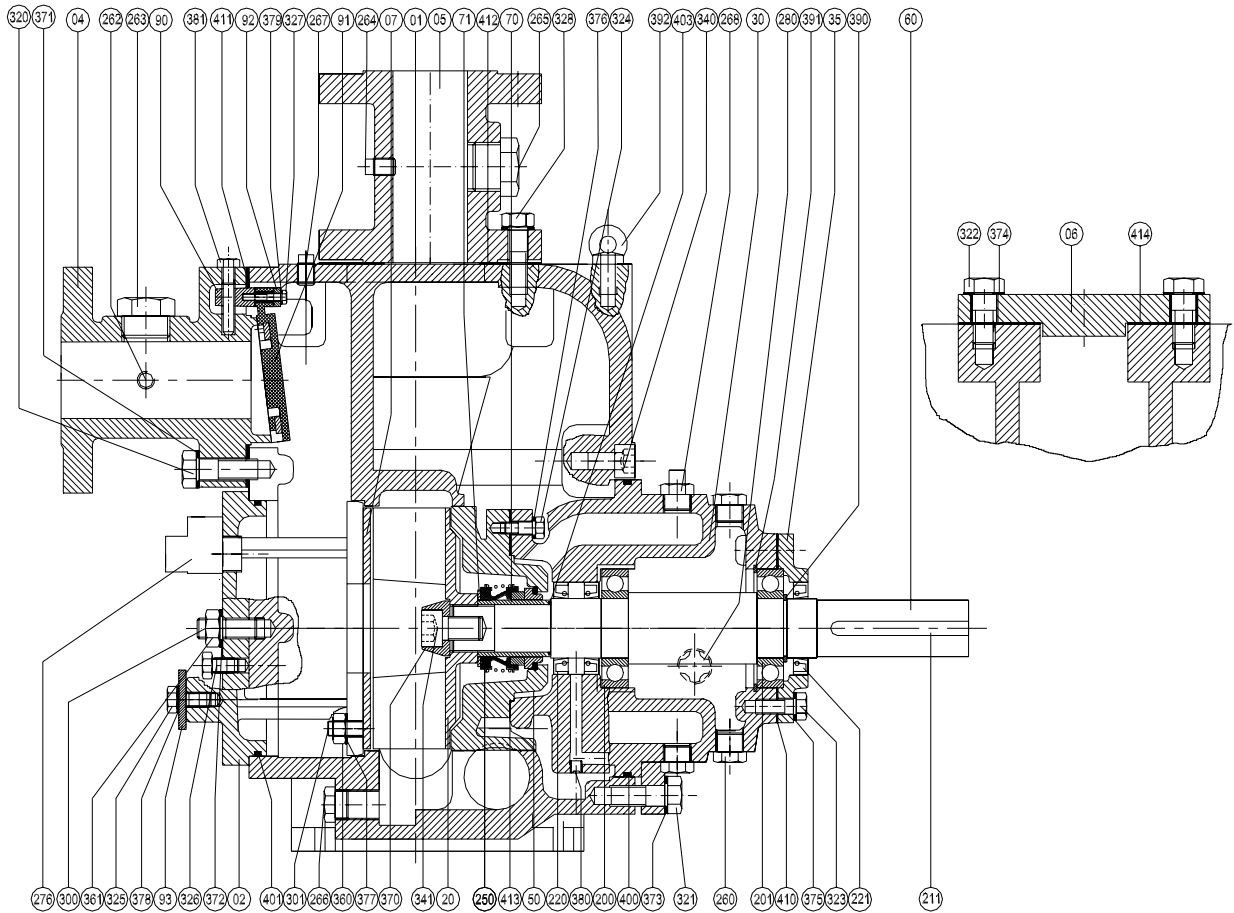

Identification Code for Pump

Example:

UKM-S Self-Priming Centrifugal Pump

Sectional Drawing and Part List (2x2, 3x3, 4x4, 6x6, 8x8)

Parts List

UKM-S Self-Priming Centrifugal Pump Automatic Air Release Valve

- ❖ Permits air to escape through the bypass line and then close automatically when the pump is fully primed and pumping at full capacity.
- ❖ During the priming process, air from the pump casing flows through the bypass line and passes through the air release valve to the wet well.

- ❖ When the pump is fully primed, flow pressure compresses the spring and closes the valve.

- ❖ When the pump shuts down, the spring returns the diaphragm to its original position.
